INTELLIGENT TRAILER COMMUNICATION

KÖGEL INTELLIGENT TRAILER (KIT)

Always keep track of your fleet – with **KIT**, the intelligent solution for a seamless trailer documentation. All relevant vehicle data, maintenance histories, and important documents are digitally accessible anytime, anywhere. Thanks to complete transparency, you can optimize processes, minimize downtime, and simplify workshop visits. KIT is your digital assistant for maximum efficiency and control in fleet management.

EFFICIENCY

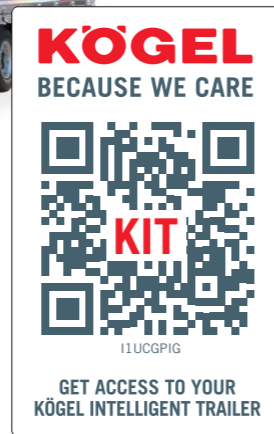

The focus is on the digitization of departure control at the start of the journey and seamless live documentation. Important documents such as load securing certificates can be stored directly in the KIT and be carried along digitally.

TRANSPARENCY

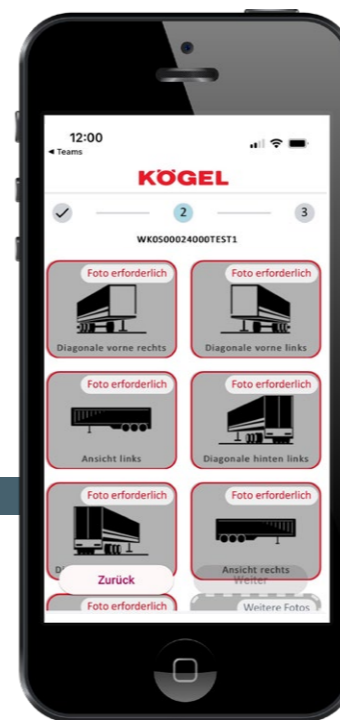

Efficient networking of all those involved in the fleet – from drivers to dispatchers to fleet managers. By providing up-to-date vehicle data in real time, you always keep track of the Overview, can act immediately and avoid potential problems with foresight.

TIME AND COST SAVINGS

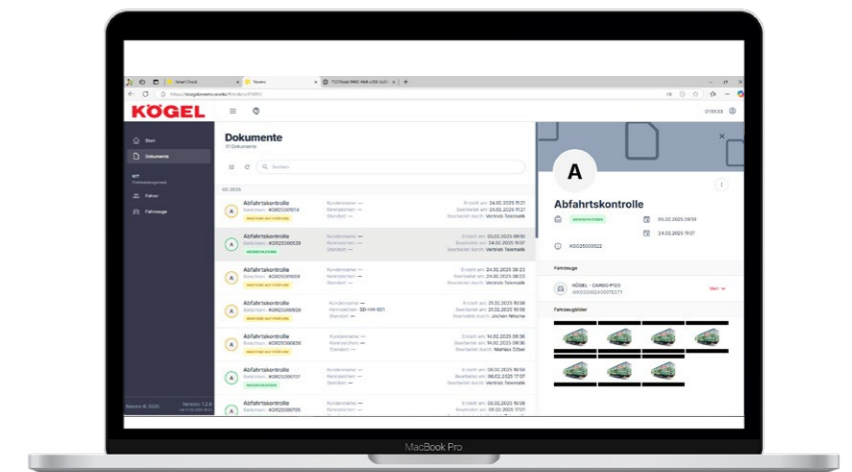

Workshop visits can be significantly accelerated in the event of maintenance, as the workshop can be accessed via the QR code with immediate access to the digital vehicle file. As a result, it has a comprehensive overview of the condition and history of the trailer, which includes the maintenance processes more efficient.

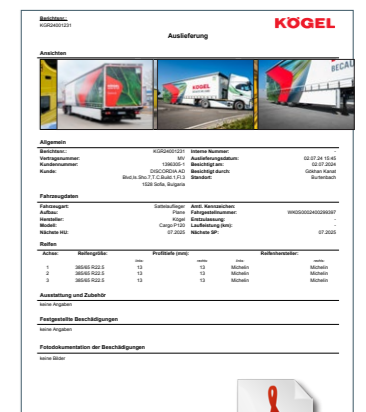

01 Driver scans the QR code which is attached on the trailer with his mobile device.

02 It is automatically connected to the **Kögel Intelligent Trailer Webapp**. The vehicle „remembers“ this information and must now be photographed from all sides. All parameters must then be checked and confirmed. Once the process is completed, the document is stored on a central server and can be accessed online.

03 All data is stored in a digital vehicle file and made available to the vehicle owner in the **customer portal**. A pdf report will also be created.
